

Notes:  
Wind turbine hub illustrated at 171.5 m to meet the maximum blade tip height. If the hub reaches 175.0 m, the rotor diameter will be reduced. Yellow band illustrates this variable.

This figure depicts the maximum rotor diameter and maximum tip height relative to mean sea level (MSL). The full range of WTG dimensions within the PDE is available in the COP Volume I, Table 4.3-1 PDE of WTG Dimensions.
